HOPE

IMAGINING A CHANGE IN OUR WAY OF LIVING

Our home is where we live, and we share this space together with humans and non-humans.

'Hope' collaborates with many experts to create different solutions to provide a liveable home for all life.

We are proud to see the resurgence of the 'living capital' in our community, and improvement in the health of humans, non-humans, and the ecosystem.

We have learned a lot about the life around us and understood how we can live in a more harmonious way with non-humans.

We know we still have so much to learn and we believe we can embrace this uncertainty together and work towards a thriving future.

Antable

Table and composter

The 'Antable' is the home of the ants. It is also a food composter where you can feed them your food scraps. They are not fussy eaters but remember they are just like you, they need a balanced diet of protein and carbohydrates. They will also bring the deceased to a separate room and you can eat them as a source of protein.

21319-*

(Go to our website to see the amount of 'living capital' you can potentially create through your purchase)

*Preconditions - After you purchase the 'Antable', you first have to join a pairing and training programme, so that the ants get to know you a bit more and learn where to bring the deceased.

Antbar

Protein bar maker

Pair the table with this 'Antbar' machine to turn the ants into delicious protein bars! Mixed with your favourite flavours like peanut butter, chocolate fudge, vanilla, strawberry cheesecake, and cinnamon roll.

599:-

Micrror

Microbes monitoring mirror

We have an intricate relationship with microbes and it closely linked to our health. The 'Micrror' scan your body using ultrasound and provides personalised health and food advice.

It shows the microbes living in your gut and their health. If it detects that you have a low number of harmless microbes or gastrointestinal problems, it will remind you to take some probiotics. It also constantly updates itself about the latest scientific findings.

899:-

Lindow

Augmented 'life' window

The 'Lindow' is a large interactive canvas that brings the nature experience closer to your home. It is equipped with lidar technology, accompanied by the most up-to-date local and global database about life on earth.

There are three functions you can subscribe to:
1. Visualise 2. Live 3. Learn

579:-/ month

Visualise

Do you wonder what kind of bird just passed by your window? Or what is the health of the tree outside?

Now you can learn and see what's happening around your home.

Live

Watch live recordings of nature around the globe.

Accompany us in our latest journey in the discovery of the underwater world.

Learn

Learn about your local community through our tailored-made courses. Discover and understand what non-human needs to thrive in their habits.

More programmes to come and you can also create one with us!

Multibed

Changing textured bed

The 'Multibed' gives you a whole new sleeping experience, stimulating nature through our newly developed mattress that changes colour, texture, and transparency.

The pulley system allows you to pull up the bed to save space, and place it back down when you need it.

We now provide three new settings:

1. Sandy beach 2. Mossy forest, 3. Floaty lake

15799:-

Sunbeamer

Sunlight emulator

Pair this modular 'Sunbeamer' device with your bed and wake up by the natural light from your favourite place in nature.

Place the top part out in nature, and it will detect and collect light data. It will then transfer the data to the bottom part of the device at your home and emulate the natural light.

2599:-

Sandy beach. 199:-/year

Held and wrapped gently by the soft yet firm sand.

Mossy forest. 299:-/year

Feel your body being embraced by the squishy spongy mosses.

Floaty lake. 399:-/year

Waterbed 2.0. Float in the changing and soothing motion of a lake.

Sleat

Grow your chair

Do you need a new chair? We know how important it is to have a space to connect with your family and friends. But it is also important to allow our forest to grow and to ensure we are extracting resources at a sustainable rate.

Once you have placed an order, we will assess the current availability of materials in our local nature reserves. We will notify and start making your chair once it is ready.

3999:-*

*You can monitor the status at our website.

Bunnel

Bird feeder

Place this device inside the wall to feed and provide a temporary home for your bird community. We cannot guarantee the bird will come, but you will know when it visits and sings you a melody of their own.

Pay 200 extra to try our newly developed feature, a live hologram bird will be projected inside your home when it detects motions in the device.

599:-, 799:-

(Go to our website to see the amount of 'living capital' you can potentially create through your purchase)

Intercommunicator

Communicate with other species

You can now communicate with your pet with our newly developed AI communicator.

We are currently working to communicate with more life forms, stay tuned!

6899:-

Yall

Your livable wall

Both the inside and outside of the wall can teem with life!

Grow plants and food on this newly developed material, simply spread the seeds across the wall, and add water into the valve.

79:-/sq meter

(Go to our website to see the amount of 'living capital' you can potentially create through your purchase)

Teed

Plant their food

It is of utmost importance to feed our non-human community. Buy seeds of local plants and plant them on the 'Yall'. You can now plant our newly added 'Climbing Fig' to produce fruits for birds, bats, and civets to eat.

Go to our website to see what else you can grow for others.

49:-*
